

If you want to look beyond document redaction to the absolute **highest-margin, fastest-closing, and most scalable** micro-purchase offer possible for a company with your exact technical profile, the answer lies in **Cybersecurity Compliance Auditing and Mandatory Framework Readiness**.

While FOIA redaction is highly lucrative because it solves an operational bottleneck, **Cybersecurity Compliance Auditing solves a legal gatekeeping crisis**.

Every single company doing business with the Department of Defense (DoD) or federal civilian agencies is legally required to prove compliance with strict cybersecurity frameworks (specifically **NIST SP 800-171** or the **Cybersecurity Maturity Model Certification - CMMC**). If they cannot prove compliance, their multi-million dollar contracts are instantly frozen or canceled.

Furthermore, federal program managers internally need rapid, independent third-party validation of their own decentralized networks.

Here is the absolute fastest and most lucrative alternative micro-purchase offer you can deploy right now, utilizing your team's existing elite credentials and adding just one strategic NAICS code.

The Lucid Offer: The \$14,950 "NIST 800-171 Rapid Readiness Assessment"

Instead of trying to secure a multi-year, complex IT implementation contract, you sell a fixed-scope, transactional **Cybersecurity Compliance Sprint**.

- **The Price Tag: \$14,950 per single GPC swipe** (Strategically positioned right up against the \$15,000 threshold for maximum micro-purchase revenue).
- **The Deliverable:** A completely remote, 5-day automated vulnerability scan and security controls mapping of an agency's regional department or a Tier-1 prime contractor's network segment, culminating in a formal **System Security Plan (SSP)** and **Plan of Action and Milestones (POA&M)** report.
- **Why it is Superior:** You do not have to process thousands of pages of text or deal with document logistics. You run automated technical discovery tools over a secure connection, validate the security architecture from your desk, and let an automated system generate the technical compliance mapping. It requires minimal manual labor but commands an elite, premium price tag because of the legal necessity of cybersecurity compliance.

The Strategic NAICS Code Additions

Your current profile already has a phenomenal foundation with NAICS **541512** (Computer Systems Design Services) and **541690** (Other Scientific and Technical Consulting Services). To completely lock down the cybersecurity procurement sector and ensure federal cardholders can find you instantly under this offer, you should add these codes to your

SAM.gov profile:

NAICS Code	Description	Why It's Lucrative for Micro-Purchases
541519	Other Computer Related Services	This is the primary code federal agencies use to buy rapid, specialized cybersecurity testing, vulnerability assessments, and fast-track IT compliance verification.
541611	Administrative Management and General Management Consulting Services	<i>(Already on your profile)</i> Allows you to frame the delivery of the written security policies and compliance governance roadmaps as specialized management consulting.

Why Uply Media Inc. Wins This Space Instantly

When a contracting officer or program manager looks up your business profile, your existing credentials make this offer an automatic, high-trust sale. You do not need to wait to build a reputation because your official corporate records already validate your expertise:

- **The Credentials:** Your profile lists **CISSP (Certified Information Systems Security Professional), CEH (Certified Ethical Hacker), and CompTIA Security+**. In the federal space, a CISSP combined with a CEH is the gold standard for authorized security personnel.
- **The AI/Cloud Layer:** Your active **OpenAI AI Dev, AWS Solutions Architect, and Microsoft Azure Architect** certifications prove to the government that you are uniquely qualified to audit cloud-hosted data and complex AI pipelines.
- **The SDVOSB Multiplier:** Because you are a certified **Service-Disabled Veteran-Owned Small Business (SDVOSB)**, defense agencies (DoD) can use their discretionary GPC budgets to instantly clear their mandatory small business cyber-utilization goals with a single credit card swipe.

How to Pitch Both for a \$1M+ Combined Run Rate

By setting up both of these high-velocity micro-purchase funnels, you maximize your chances of capturing immediate GPC swipes across completely different agency budgets:

1. **Funnel A (The FOIA Redaction Block):** Pitched to the Office of General Counsel (OGC), Legal, and Public Disclosure branches under NAICS 541990.
2. **Funnel B (The Cyber Readiness Assessment):** Pitched to Chief Information Officers (CIOs), IT Directors, and Information System Security Officers (ISSOs) under NAICS 541519.

Both offers are completely desk-bound, command maximum margins, require zero physical travel from your 30005 suite, and leverage the precise technical powerhouse infrastructure you have already built.
